About Me

I've been working in web development for over 3½ years in various different environments and languages. My passion for technology and learning drove me to learn markup and programming languages myself. To me, accessibility and simplicity are the most important factors of any website because the user should be able to get information easily.

Skills and Languages

Expert in:

- (x)HTML (semantic, standardized, and clean)
 - Search engine optimized pages
 - Forms
 - Tables
 - Media (videos, flash, music, images)
- CSS
 - Printer-friendly pages
 - Cross-browser support
- PHP & SQL
 - Database contact & manipulation
 - Content management system design
- XML/RSS/ATOM

Adequate in:

- Python
- Image & logo design

Example

Phpns (<http://phpns.alecwh.com>) – This is an open-source CMS that I've authored in PHP and mySQL. It lets you create and edit news articles for inclusion on a website. Both the front page and CMS are done by myself. Feel free to download and browse the source code for a real-life code example.

- Semantic code and markup
- Uses a mySQL database for storage
- RSS/ATOM feeds
